The Guide, written in clear, concise language with multiple examples, is designed to help attorneys advise their clients on the major changes the Secure Act made regarding retirement distribution.

Topic Modeling is a technique to understand and extract the hidden topics from large volumes of text. Latent Dirichlet Allocation (LDA) is an algorithm for topic modeling, which has excellent implementations in the Python's Gensim package. This tutorial tackles the problem of finding the optimal number of topics.

A bad introductory sentence is: The point of this guide is not scare the hell out of you, it is to help you. She came to The Washington Post as …

Absolutely every business has some kind of Internet presence—they can be large or small, sell products and services, be very specific or general—they all want the same thing: to reach the largest number of people while investing the smallest amount of resources and getting the largest amount of benefits possible.

Well, there's a very efficient method for achieving all of this while...
